

Live Demo Prompts

Copy-paste these as we go, phase by phase. No explanation here, just what to type and where. Full setup: `PARTICIPANT_SETUP.pdf` in the repo.

Terminal A = the terminal where you ran `hermes` in Section 1. **Terminal B** = the terminal running the backend (`uvicorn`), from Section 1's optional step. Just needs to stay running, nothing to type there.

Terminal C = only if you completed Section 2, the terminal connected to your VM over SSH.

PHASE 0 to 2 - Framing, architecture, code walkthrough

Nothing to type, just follow along.

PHASE 3 - The agent working

Terminal A - type:

```
Find Nike running shoes under $100, size 10
```

```
Add the second one to my cart
```

PHASE 4 - Persistence: memory and skills

4a. Terminal A: `/exit` , then relaunch:

```
hermes
```

Terminal A - type:

```
What's in my cart?
```

4b. Terminal A - type:

```
I'm usually size 10, budget under $100, I prefer Nike
```

Terminal A: `/exit` , then relaunch:

```
hermes
```

Terminal A - type:

```
What's my usual size and budget?
```

4c. Terminal A - type:

```
Compare the Nike Air Zoom Pegasus and Adidas Ultraboost by price and rating,  
recommend one
```

Terminal A - type:

```
Save what you just did as a skill
```

PHASE 5 - Live over Telegram (needs Section 2 setup, your own bot)

Terminal C - run this first, leave it running:

```
sudo tail -f ~/hermes-data/logs/agent.log
```

Telegram app or Telegram Web, message your bot:

```
Find Nike running shoes under $100, size 10
```

```
Add the first one to my cart
```

```
What's in my cart?
```

PHASE 6 - Real commerce: Shopify and Amazon (needs Section 2 setup, your own store)

6a. Terminal A - type:

```
Using the shopify store tools, find running shoes under $100
```

```
Using the shopify store tools, add the first one to my cart
```

```
Using the shopify store tools, what's in my cart? Show the checkout URL.
```

Open the checkout link, pay with the Bogus Gateway test card (card number `1`, any future expiry, any 3 digit CVC).

6b. Terminal A - type:

```
Search Amazon for Nike running shoes under $100 and show me a product photo, link, and price for the top result using markdown. Don't use the browser tool, just search and summarize.
```

PHASE 7 - Autonomy: scheduled job (needs Section 2 setup)

One time setup, if you want to try this yourself (skip if you'd rather just watch):

```
python mcp_server/price_watch.py --add "Nike Pegasus" --target 80
```

Terminal A - type:

```
hermes cron list
```

```
hermes cron run shopify-price-watch
```

```
python mcp_server/price_watch.py --dry-run
```

CLOSE

Nothing to type. Full setup for everything above: `PARTICIPANT_SETUP.pdf`.
